México

Ingeniería en computación

7mo semestre, 2025B

Sistemas operativos

Actividad: Paquetes instalados

Profesora: Hazem Álvarez Rodríguez

Alumno: Urrieta Rangel Alonso Ismael

Matricula: 2225867

28/08/2025

Comenzamos ejecutando el comando **dpkg -l**, el cual nos muestra la lista completa de todos los paquetes instalados en el sistema, junto con su estado, versión y descripción breve.

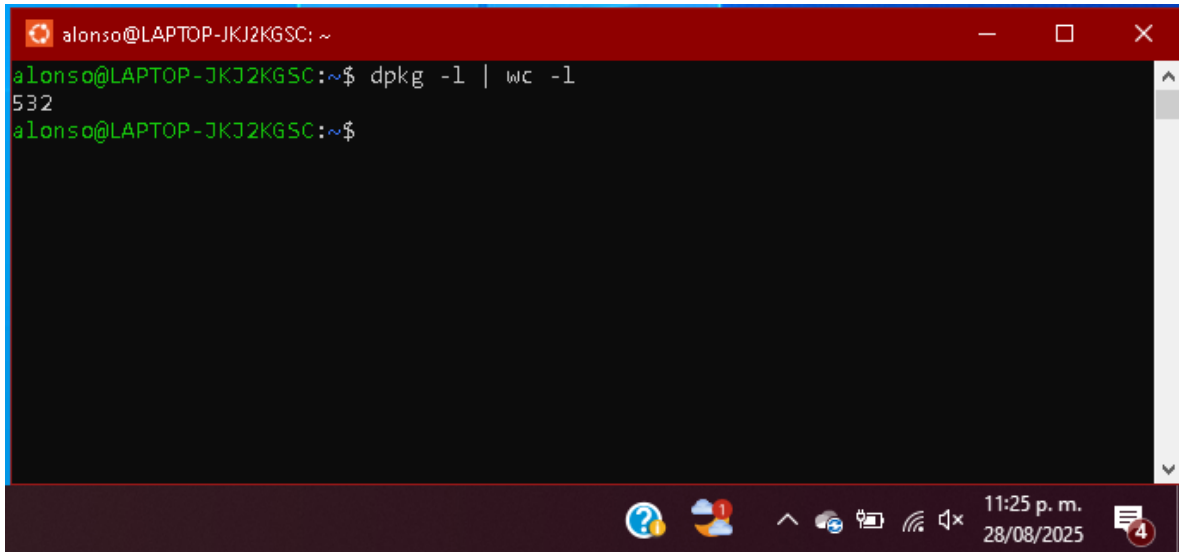

```
alonso@LAPTOP-JK2K5GSC:~$ dpkg -l
Desired=Unknown/Install/Remove/Purge/Hold
| Status=Not/Inst/Conf-files/Unpacked/half-Inst/trig-await/Trig-pend

```

Continuamos con el comando **dpkg -l | wc -l**, el cual hace dos cosas:

- **dpkg -l**: Lista todos los paquetes del sistema (instalados, desinstalados, con errores, etc.) en un formato detallado.

- | wc -l: Toma la salida de dpkg -l y cuenta el número de líneas que produce.

```
alonso@LAPTOP-JKJ2KGSC: ~  
alonso@LAPTOP-JKJ2KGSC:~$ dpkg -l | wc -l  
532  
alonso@LAPTOP-JKJ2KGSC:~$
```

Y para finalizar el comando `dpkg -l > "Nombre_del_archivo".txt`, que también realiza dos cosas:

- `dpkg -l`:
 - Lista todos los paquetes del sistema (instalados, desinstalados, con errores) con su información completa:
 - Nombres de paquetes
 - Versiones
 - Estados
 - Descripciones breves
- `> "Nombre_del_archivo".txt`:
 - Toma la salida completa de `dpkg -l` y la guarda en un archivo de texto llamado `packages.txt` en el directorio actual.

Resultado final:

Crea un archivo `.txt` que contiene toda la información de todos los paquetes del sistema.
